11 House Action: **WITHDRAWN**

---

13  
14 Whereas, opioid deaths in Michigan continue to surge, from 500 deaths in 1999 to more  
15 than 2,000 deaths in 2018, and

16  
17 Whereas, current government and private responses to persons with opioid addiction have  
18 also increased; however, these efforts will not catch up with the increase of opioid deaths without  
19 early interventions before dependence, and

20  
21 Whereas, current critical treatments have improved including but not limited to the use of  
22 medication for opioid use disorder (MOUD), and

23  
24 Whereas, these treatments are enhanced by effective psychiatric efforts (e.g. trauma  
25 focused psychotherapy), and

26  
27 Whereas, deaths from overdose mostly occur during and after adolescence, and

28  
29 Whereas, this presumes that our understanding of a child’s experience before dependence  
30 is key to our understanding of later opioid dependence, and

31  
32 Whereas, referrals to child psychiatrists and other mental health professionals who  
33 understand the relationship of deprivation (of love) and trauma to subsequent depression and  
34 substance dependence are critical after recognition of the risks; therefore be it

35  
36 RESOLVED: That MSMS support and encourage the implementation of screening tools such  
37 as the Rapid Adolescent Prevention Screener (RAPS), the PHQ9, and the GAD-7 to detect high risk  
38 behaviors and mental health conditions such as substance use, smoking, and vaping in adolescent  
39 patients aged 12 to 20; and be it further

40  
41 RESOLVED: That MSMS support and encourage the continuing education of all physicians  
42 treating very young children (0-5 years of age and older) who suffer from deprivation (of love) and  
43 adolescents who are already using addictive substances (marijuana, alcohol, opioids, including  
44 heroin), and cocaine.

WAYS AND MEANS COMMITTEE FISCAL NOTE: \$2,000-\$4,000 for physician outreach.

**Relevant MSMS Policy:****Routine ACE Screening in Pediatric Appointments**

MSMS supports screening for adverse childhood experiences in annual pediatric appointments. (Board Action Report #2, 2019 HOD, re Res29-18)

**Relevant AMA Policy:****Adverse Childhood Experiences and Trauma-Informed Care H-515.952**

1. Our AMA recognizes trauma-informed care as a practice that recognizes the widespread impact of trauma on patients, identifies the signs and symptoms of trauma, and treats patients by fully integrating knowledge about trauma into policies, procedures, and practices and seeking to avoid re-traumatization.
2. Our AMA supports:
  - a. evidence-based primary prevention strategies for Adverse Childhood Experiences (ACEs);
  - b. evidence-based trauma-informed care in all medical settings that focuses on the prevention of poor health and life outcomes after ACEs or other trauma at any time in life occurs;
  - c. efforts for data collection, research, and evaluation of cost-effective ACEs screening tools without additional burden for physicians.
  - d. efforts to educate physicians about the facilitators, barriers and best practices for providers implementing ACEs screening and trauma-informed care approaches into a clinical setting; and
  - e. funding for schools, behavioral and mental health services, professional groups, community, and government agencies to support patients with ACEs or trauma at any time in life; and
  - f. increased screening for ACEs in medical settings, in recognition of the intersectionality of ACEs with significant increased risk for suicide, negative substance use-related outcomes including overdose, and a multitude of downstream negative health outcomes.
3. Our AMA supports the inclusion of ACEs and trauma-informed care into undergraduate and graduate medical education curricula.
